*You need an Automated External Defibrillator (AED) to deliver a shock to a casualty who is in cardiac arrest. You can use an AED on your own or with a helper. But there are many different types of defibrillators, and you may not know which is best for your workplace. In this course we introduce the different types of defibrillators to help you select the most appropriate for your organisation.*

*(CPR is different for adults, children and infants, and our guidance has been updated to reflect changes due to COVID-19.)*

## Who is this training for?

*This course is for any person or organisation in the UK that:*

- *Doesn't have a defibrillator within a minute's reach.*
- *Doesn't know how to operate a defibrillator in the event of someone going into cardiac arrest.*

## What does the course cover?

*This online course covers:*

- *The importance of defibrillators.*
- *Deciding which defibrillator is right for you.*
- *How to use a defibrillator.*
- *How to service a defibrillator.*

## What is the benefit to your business?

*This course will offer your staff quick and effective training on defibrillator use and upkeep. The training is suitable for private and public sector companies, including community homes (care homes) and other organisations in the healthcare sector.*

Video Presentations.

Interactive games.

Final exam - certificates provided.

***Automated External Defibrillators (AEDs) are used to deliver a shock to a casualty who is in cardiac arrest. You can use an AED on your own or with a helper.***

***If you have a helper when using the AED then you should wear a face mask as you will be unable to maintain a 2 meter distance between each other when operating the AED.***

***CPR is different for adults, children, and infants, and our guidance has been updated to reflect changes due to COVID-19 (Coronavirus).***
